

Java 8 to 25... Graal vm

Laurent Bourgès
JMMC @ OSUG

Java 8 to 25: evolution

- https://dev.to/nk_sk_6f24fdd730188b284bf/the-complete-guide-to-java-evolution-java-8-to-java-25-5gik
- <https://javaevolved.github.io/fr/>

Java 8: 2014

- Lambda / Stream

Java 9: 2017

- Module System (encapsulation java API => break library compatibility: java.xml removal...)

- Java 11 / 17 / 21 / 25: versions Long Term Support (tous les 2 ans)

- 17: deprecated security manager, Unsafe API

- 22: Foreign Function & Memory API (FFM) to interoperate with native library

<https://openjdk.org/jeps/454>

Full Java Evolution Process (JEP) list: <https://chriswhocodes.com/jepmap.html>

OpenJDK master (27): <https://github.com/openjdk/jdk>

GraalVM: alternative JVM

<https://www.graalvm.org/>

- Supporte plusieurs “languages” (java, python, js, R, WASM)
- Native image = produire un paquet binaire (no JIT => AOT)

GraalPy: <https://www.graalvm.org/python/docs/>

Python lib compatibility list:

<https://www.graalvm.org/python/compatibility/>

Testé avec un code scientifique (oimodeler), scipy, numpy, matplotlib ... (CLI + outputs): premier accès lent (compilation in background), puis rapide !
